

# Clinical & Epidemiological Studies: Health Measures of Prebiotic Success

---

Cyril W.C. Kendall

Department of Nutritional Sciences, Faculty of Medicine,  
University of Toronto;  
Clinical Nutrition & Risk Factor Modification Center,  
St. Michael's Hospital;  
Toronto, Ontario  
Canada.

# Fiber Hypothesis

---

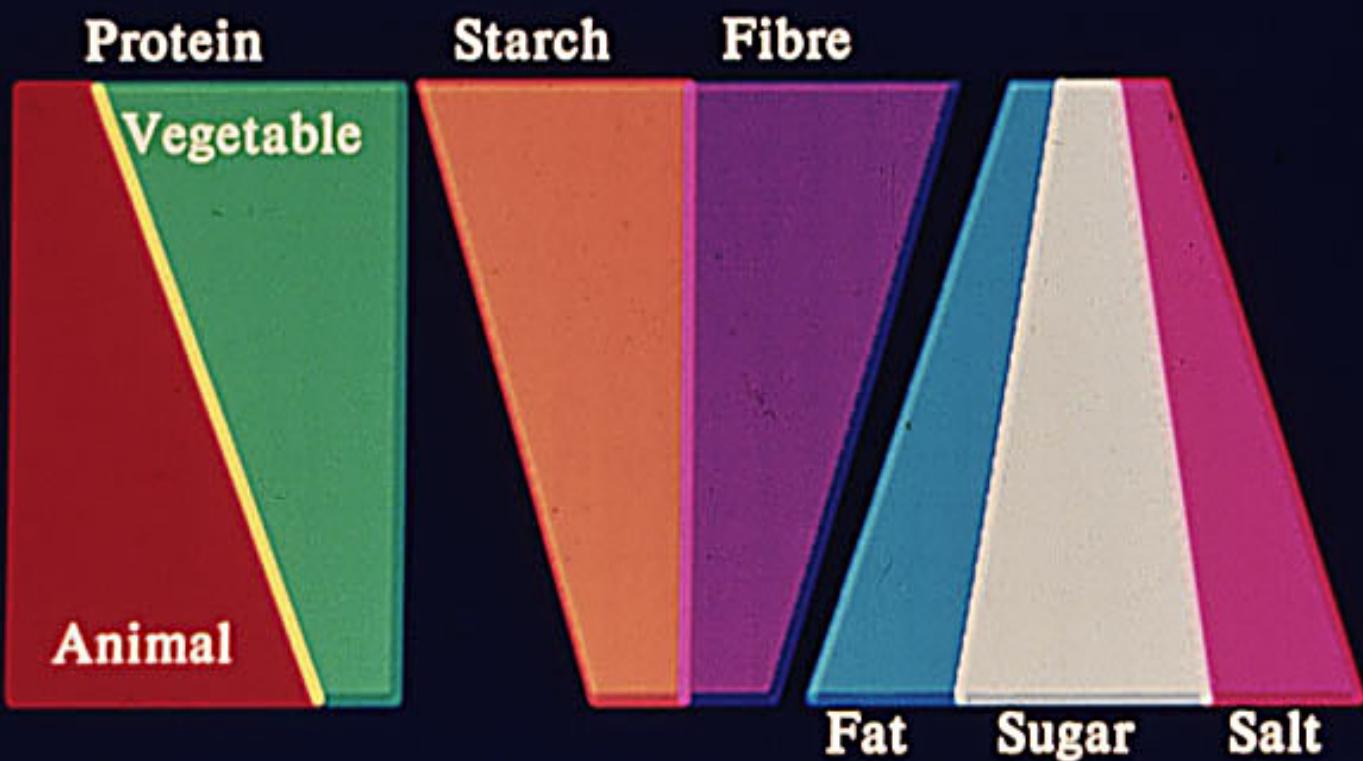

Dr. Dennis Burkitt (observational studies in Africa)

- African diet -  $\uparrow$  fiber &  $\downarrow$  fat
- $\uparrow$  stool output
- $\downarrow$  chronic disease (cancer, heart disease diabetes)

# DIETARY CHANGES WITH PROSPERITY

Traditional,  
Developing  
Countries

Modern,  
Developed  
Countries

# Current Problem → Chronic Diseases

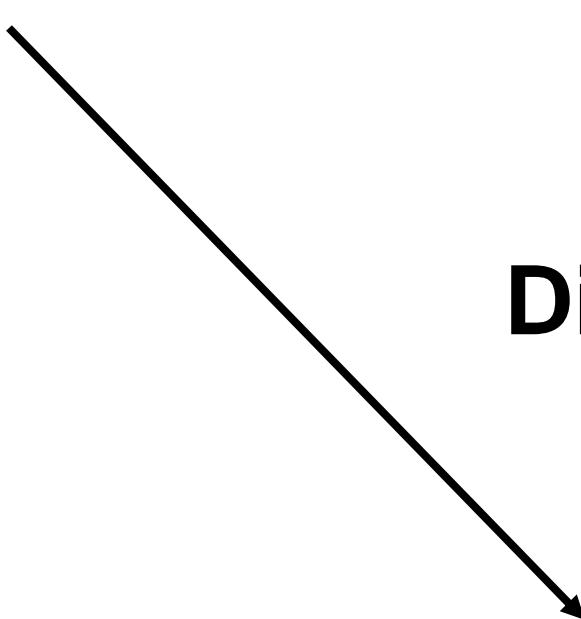

---

## Metabolic Syndrome

↑Waist Circumference  
↑BP  
↑Disglycemia  
↑Inflammation

## Diabetes

## CHD

# Fiber and Colon & Breast Cancers

---

## Human Studies ( $\uparrow$ fiber & $\downarrow$ fat)

### Population Studies

- Finland, Scotland, USA -  $\uparrow$  incidence
- Latin America, Africa, Japan -  $\downarrow$  incidence

### Migrating Populations

- Japanese (Japanese, Hawaii, USA)

### Case-Control Studies

# Fiber and Colon Cancer

---

## High Fiber Diets

- $\uparrow$  fecal bulk (dilution effect)
- $\downarrow$  transit time ( $\downarrow$  contact time)
- promote healthy bacteria
- $\downarrow$  secondary bile acid concentrations
- $\uparrow$  butyrate concentrations

# Fiber and Colon Cancer

---

## Human Studies (prospective)

61,463 healthy Swedish women (~10y follow-up)

- ↑ fruit & vegetable intake - ↓ CRC development
- ↓ cereal fiber intake – no effect

(Terry et al. *J Natl Canc Inst* 2001)

88,757 American women (16 y follow-up)

- ↑ dietary fiber (cereal, fruit or vegetable) – no effect on development of CRC or adenomas

(Fuchs et al. *N Engl J Med* 1999)

# Fiber and Colon Cancer

---

## Human Studies (intervention – high risk groups)

1,905 subjects followed for ~4 years

- adopting a diet low in fat & high in fiber, fruit and vegetables did not influence recurrence of CRC adenomas            (*Schatzkin et al. N Engl J Med 2000*)

1,303 subjects followed for ~3 years

- wheat bran fiber (13 g/d) did not protect from recurrent CRC adenomas (*Alberts et al. N Engl J Med, 2000*)

# Breast Cancer

---

## Risk Factors (population studies)

- ↑ estrogen (early menses, late 1<sup>st</sup> pregnancy, late menopause)
- ↑ body weight
- ↓ physical activity
- ↑ fiber & ↓ fat diets
- ↓ fruit & vegetable intakes

# Fiber and Breast Cancer

---

## High Fiber Diets

- ↑ estrogen excretion
- ↓ circulating estrogen levels
- flavonoids (anti-estrogens)

# Fiber and Breast Cancer

---

## Human Studies (prospective)

Nurses' health Study followed for ~10 years

- HRT - ↑ breast cancer risk

(*Colditz et al. N Engl J Med 1995*)

## Combined Prospective Studies

- ↑ fiber & ↓ fat – no effect

(*Willett. Cancer 1994*)

# Fiber and Breast Cancer

---

## Human Studies (intervention – high risk groups)

291 women followed for ~1 year

- adopted a diet low in fat & high in fiber, fruit and vegetables.
  - ↓ circulating estrogen levels

(Rock et al. *J Clin Oncol*, 2004)

# Significant Scientific Agreement on Fiber

---

- Dietary guidance on increasing fiber (cereal grains, vegetables, fruits)
  - Recommend 25-38 g/d DF
  - Usual dose only 15 g
- Laxation benefits
  - High fibre cereals/bulk laxative
- Body Weight Control
  - High fibre diets associated with lower body weight
- Cholesterol lowering effects
  - Health claims for oat bran, psyllium, B-glucan

# **Wheat Bran & Colonic Function**

---

## **Metabolic Study (n=23):**

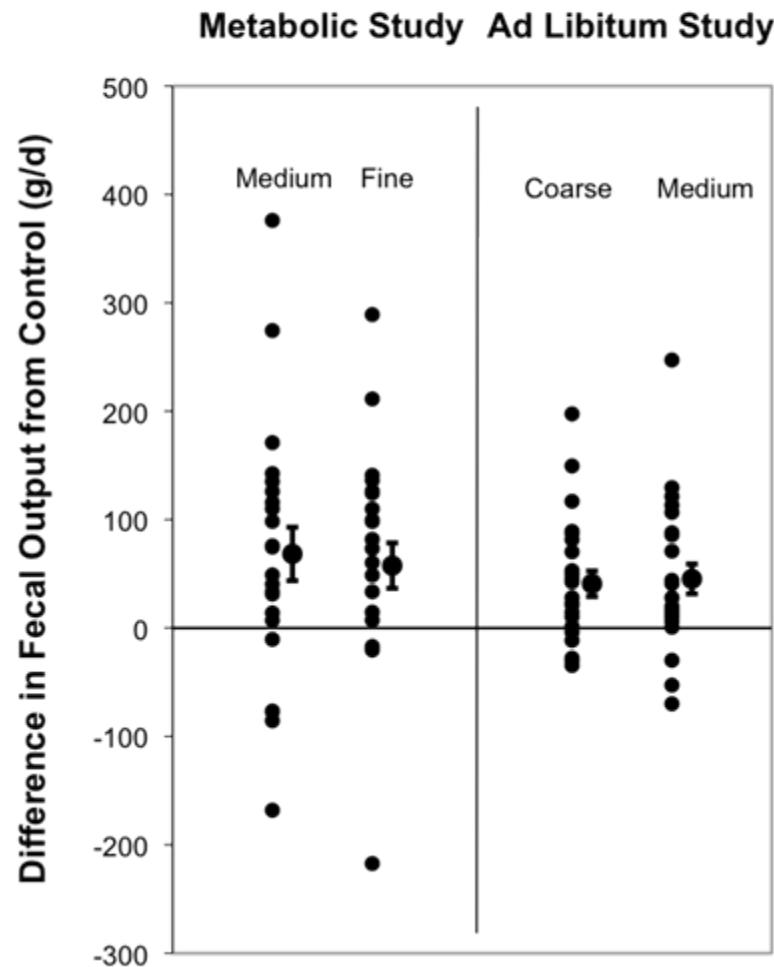

- Randomized controlled crossover study
- 4 week treatments (breads & breakfast cereals).
- Control Diet
- + 19 g/d fiber WB - Fine particle size (50 um)
- + 19 g/d fiber WB - Medium particle size (735 um)

## **Ad Libitum Study (n=24):**

- Randomized controlled crossover study
- 4 week treatments (breads & breakfast cereals).
- Control Diet
- + 17 g/d fiber WB – Medium (692 um)
- + 17 g/d fiber WB - Coarse (1158 um)

# Fiber and Colonic Health

---

*Jenkins DJ, Kendall CW et al. J Am Coll Nutr 1999.*

# Wheat Bran: Fecal & SCFA Output

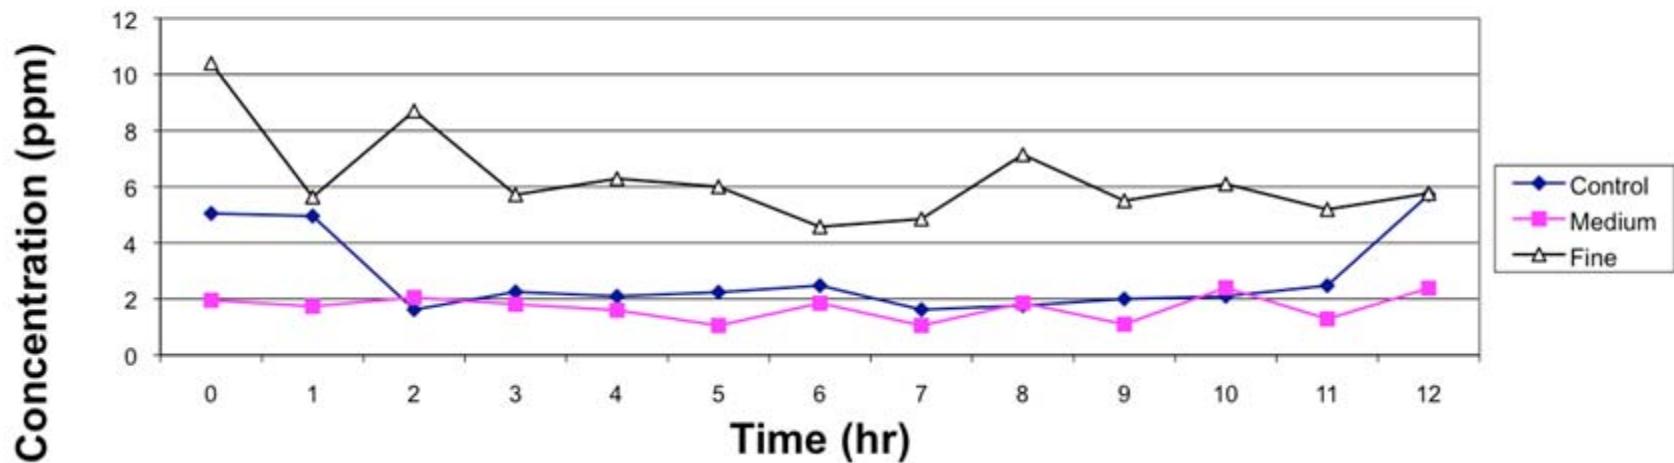

---

	Control	Wheat Bran Medium	Wheat Bran Fine
<b>Fecal</b> (g/d)	211 $\pm$ 23 <sup>a</sup>	279 $\pm$ 23 <sup>b</sup>	268 $\pm$ 23 <sup>b</sup>
<b>Total SCFA</b> (mmol/d)	24.7 $\pm$ 3.1 <sup>a</sup>	32.4 $\pm$ 3.0 <sup>b</sup>	35.3 $\pm$ 3.5 <sup>b</sup>

Jenkins DJ, Kendall CW et al. J Am Coll Nutr 1999.

# Wheat Bran: Fermentation Breath Hydrogen

---

# What is a Heart-Healthy Diet?

---

National Cholesterol Education Program (ATP III):

- 25-35% total fat
- <7% saturated fat; <10% PUFA; <20% MUFA
- <200 mg dietary cholesterol
- 20-30 g/d fiber
  - viscous (soluble) fiber (10-25 g/d)
  - plant stanol/sterols (2 g/d)
  - nuts – source of healthy fat, ↑ fiber (*AHA, 2000*)
  - soy protein – high risk individuals (*AHA, 2000*)

(*JAMA, 2001*)

# Each Additional g of Fiber in the Diet Reduces CHD Risk

---

- **Men**

- 6 g/d ↑ → 24% ↓ CHD (Khaw&Barrett-Connor, 1987)
- 10 g/d ↑ → 29% ↓ CHD (Rimm et al, 1996)

- **Women**

- 6 g/d ↑ → 33% ↓ CHD (Khaw&Barrett-Connor, 1987)
- 5 g/d ↑ → 37% ↓ CHD (Wolk et al, 1999)
- 14g/d ↑ → 54% ↓ MI (Liu et al., 2002)

- **Meta-analysis**

- 10g/d ↑→ 27% ↓ CHD death (Pereira et al. 2004)

# Serum Lipid Response to a Diet Very High in Fiber From Vegetables and Fruit (Simian Diet)

---

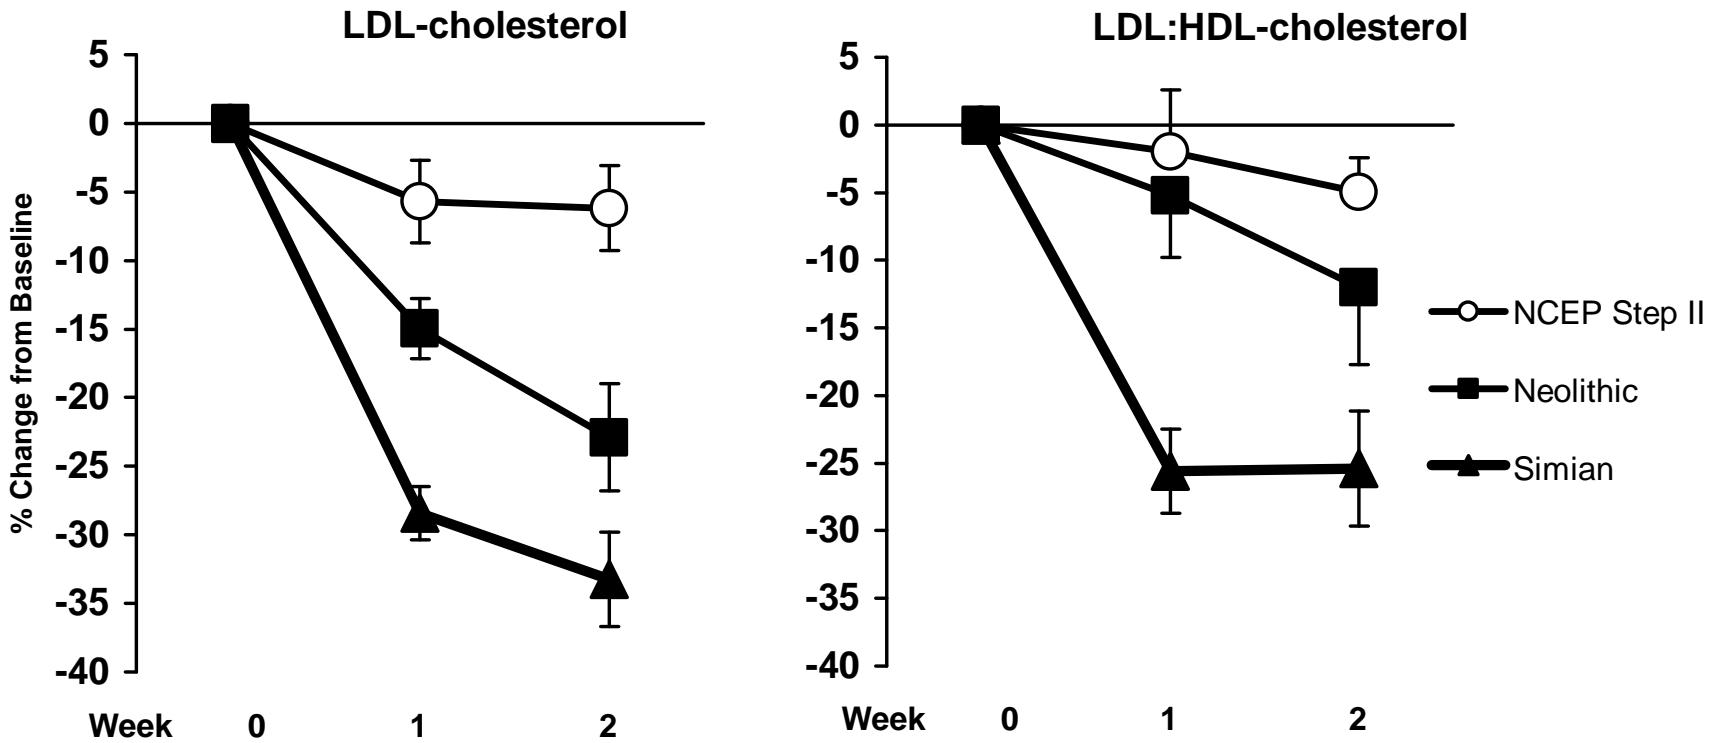

- Low-fat therapeutic diet (NCEP Step 2)  
low-fat dairy, white rice, potato, fruit & vegetables (5 servings/d)
- High-fiber starch-based (Neolithic)  
low-fat yogurt, whole grains, lentils, fruit & vegetables (5 servings/d)
- High-fiber vegetable-based (Simian)  
63 servings/d fruit & vegetables, nuts

# Daily Intakes of Vegetable Protein, Fiber, Phytosterols & Nuts

---

	NCEP Step 2	High-Fiber Starch-Based	High-Fiber Vegetable-Based Simian
Vegetable Protein (g/d)	28	64	93
Total Dietary Fiber (g/d)	26	46	143
Phytosterols (g/d)	0.3	0.5	1.0
Nuts (g/d)	0	0	84

# Serum Lipid Response to a Diet Very High in Fiber From Vegetables and Fruit (Simian Diet)

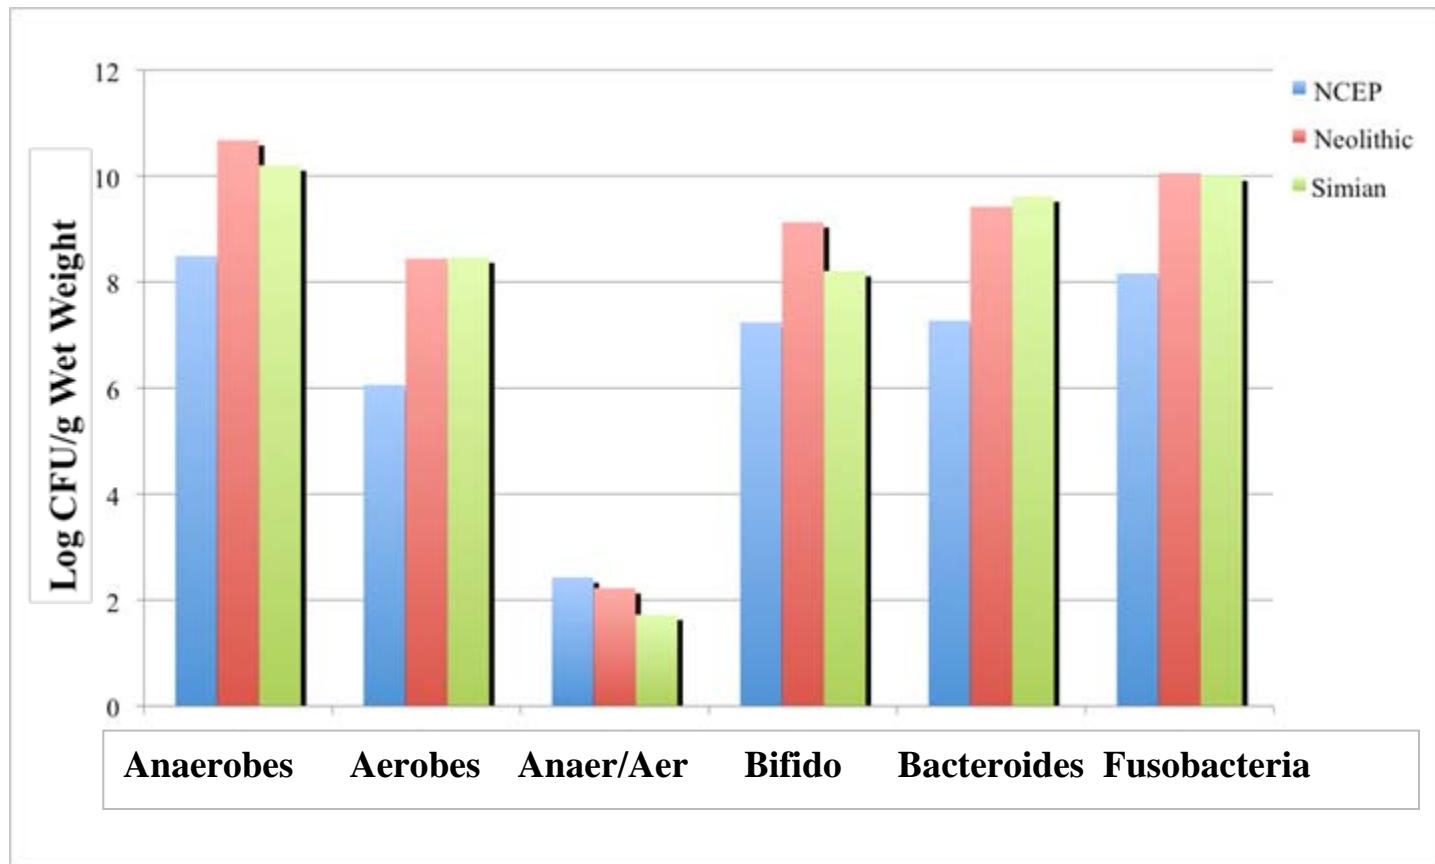

# The Simian Diet

---

5.5 kg food in

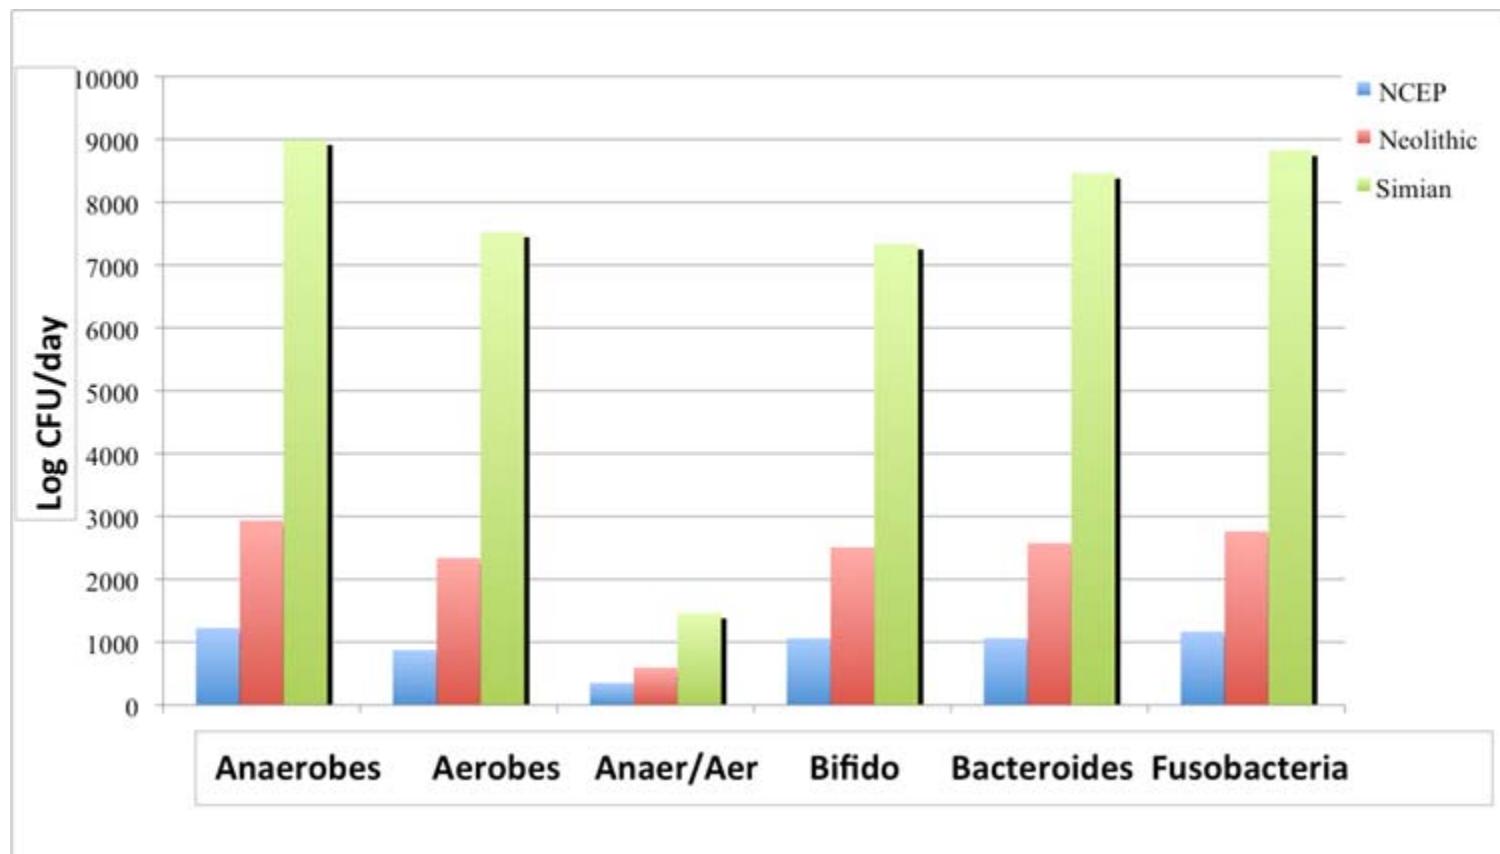

1.0+ kg feces out  
& 1g bile acids

# Simian Diet & Colonic Microflora Concentration

# Simian Diet & Colonic Microflora

## Daily output

# Portfolio Diet

---

## Study Foods:

Readily available in supermarkets.

**Viscous Fiber:** ~20 g/d

oats, barley, psyllium, legumes, eggplant, okra

**Vegetable Protein:** ~80 g/d

soy, beans, chick peas, lentils

**Plant Sterols:** ~2 g/d

plant sterol margarine (1g/1000 kcal)

**Nuts:** ~30 g/d

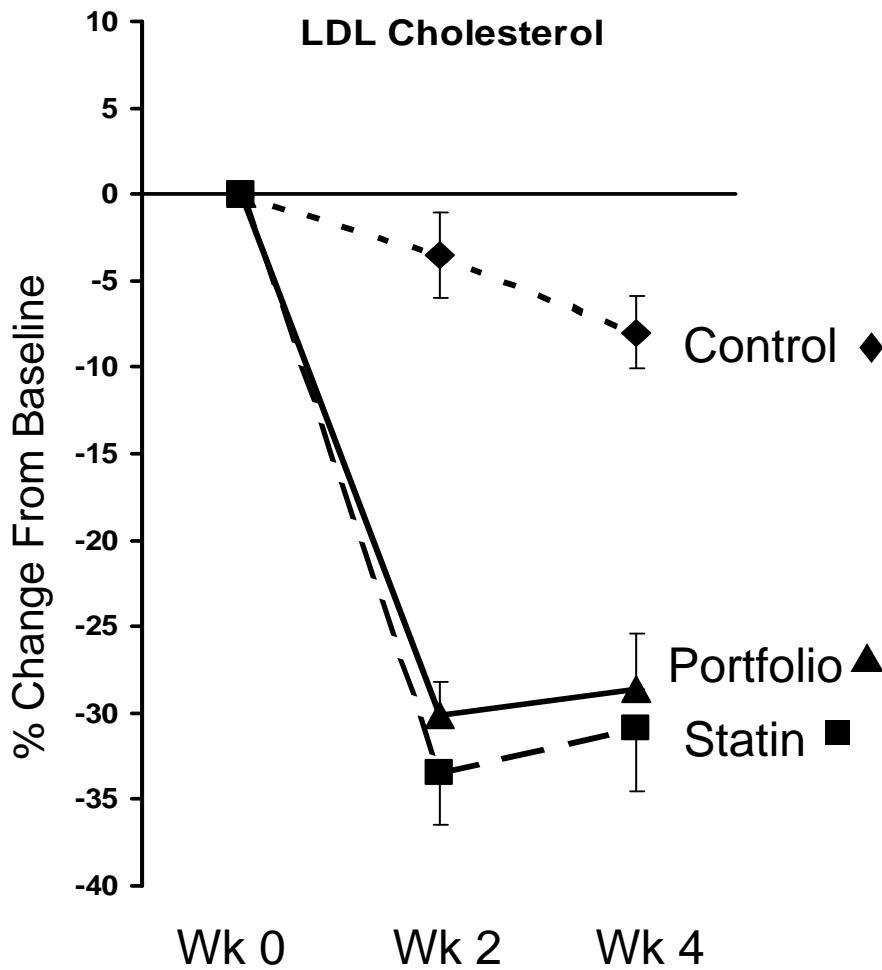

almonds

# Portfolio Diet #3: Results

# Overview

---

- High fiber diets improve laxation and gastrointestinal health.
- Wheat bran and other particulate fibers are to some extent fermented.
- In large cohort studies high fiber intakes, which is predominantly wheat bran in North America, are associated with reduced risk of cardiovascular disease and diabetes.
- Both insoluble and soluble fibers may produce metabolic advantages other than the traditional markers of cholesterol lowering and blunting postprandial glucose.

# Thank you for your attention
