Barbara Zedler, M.D.

Philip Morris USA

LSRO Reduced Risk Review, Core Committee Meeting: October 19, 2005

This presentation is intended for the scientific and the public health community. The information shared with the scientific and the public health community is not part of PM USA consumer communications and, if shared with the consumer, has the potential to change the context of the communications intended for the consumer.

Reduced Risk Evaluation

Objective: Address IOM Regulatory Principle 4

“(b) if a risk reduction claim is made, that the product can reasonably be expected to reduce the risk of one or more specific diseases or other adverse health effects” *

Reality: The path to ‘reasonable expectation’ is undefined

Filling the gaps in knowledge will take:

- Better mechanistic understanding (disease/exposure/complex mixture interactions)
- Additional biomarkers
 - “...because definitive evidence that a new PREP actually reduces harm will often be unavailable, short-term markers that reflect long-term outcomes are needed.” *
 - “...the use of intermediate markers does not replace long-term follow-up and epidemiological surveillance, but it can be a basis for estimating effects before direct evidence from epidemiological studies is available.” *
- Engagement
- Process definition

*Institute of Medicine, 2001, Clearing the Smoke: Assessing the Science Base for Tobacco Harm Reduction

LSRO Reduced Risk Review, Core Committee Meeting: October 19, 2005

This presentation is intended for the scientific and the public health community. The information shared with the scientific and the public health community is not part of PM USA consumer communications and, if shared with the consumer, has the potential to change the context of the communications intended for the consumer.

Potential Non-clinical Assays Related to Disease

General	Cancer	COPD	CVD
<ul style="list-style-type: none"> ➤ Superoxide dismutase ➤ Lung inflammation in BALF, (i.e. neutrophils) ➤ GSH in biological fluids ➤ HO-1 assay 	<ul style="list-style-type: none"> ➤ Mutagenicity assay ➤ Gap junction assay ➤ Micronucleus assay ➤ Hprt mutation assay with rat lung fibroblast ➤ Cytokeratin expression in rat lung tumors ➤ Dermal carcinogenicity model (Sencar mouse) ➤ Comet assay ➤ Chronic inhalation model for lung cancer ➤ Lung tumor progression in transgenic mouse strains 	<ul style="list-style-type: none"> ➤ Inactivation of antiproteases ➤ Macrophage activation in BALF ➤ CD4/CD8 lymphocytes in murine lung tissue ➤ Lymphocyte differentiation in murine in lymph nodes ➤ Myeloperoxidase in biological fluids ➤ Early biomarker of lung damage (CC16) ➤ Lung mechanics in rat and mouse models ➤ Mouse models of emphysema 	<ul style="list-style-type: none"> ➤ Endothelial cell assay ➤ Angiogenesis assay ➤ Cardiac telemetry ➤ Atherosclerosis model (Apo E deficient mouse strain) ➤ Cardiovascular disease model (Guineas pigs) ➤ Thrombosis model (Apo E-/-) ➤ Cardiac function and myocardial hypertrophy (SHHF and JCR stroke prone rat)

Note: Intended to list assays under consideration for use

LSRO Reduced Risk Review, Core Committee Meeting: October 19, 2005

This presentation is intended for the scientific and the public health community. The information shared with the scientific and the public health community is not part of PM USA consumer communications and, if shared with the consumer, has the potential to change the context of the communications intended for the consumer.

Biomarkers of Potential Harm

Biomarker of Potential Harm	Biomatrix	Pathogenic Mechanism	Health Effect
von Willebrand Factor	plasma	endothelial cell dysfunction	atherosclerosis
microalbumin	urine		atherosclerosis
nitrate+nitrite, exhaled breath NO	plasma		
cellular adhesion molecules (<i>VCAM-1, ICAM-1, E-selectin</i>)	blood		
homocysteine (SAM, SAH)	blood		
endothelium-dependent vasoreactivity (<i>arterial, venous</i>)	N/A		atherosclerosis
white blood cell count (<i>total, subpopulations</i>)	blood, BALF	inflammation	
interleukins-6, -8 (-10)	blood, BALF		
fibrinogen	plasma		
hs C-reactive protein	blood		atherosclerosis
sCD40 L	blood		
tumor necrosis factor α	blood		
nuclear factor kappa beta (NF-kB)	blood		
epidermal growth factor-1 (egr-1)	blood		
N-carboxymethyl lysine	blood		
bilirubin	serum	oxidative stress	
superoxide dismutase (SOD), catalase	blood		
8-epi-prostaglandin $F_{2\alpha}$	urine		
15-keto-dihydro-prostaglandin $F_{2\alpha}$	urine		
isoprostane $F_{2\alpha}$ -VI	urine		
H_2O_2	exhaled breath condensate		

rapid-response

slow-response

LSRO Reduced Risk Review, Core Committee Meeting: October 19, 2005

This presentation is intended for the scientific and the public health community. The information shared with the scientific and the public health community is not part of PM USA consumer communications and, if shared with the consumer, has the potential to change the context of the communications intended for the consumer.

Biomarkers of Potential Harm (continued)

Biomarker of Potential Harm	Biomatrix	Pathogenic Mechanism	Health Effect
total, HDL-, LDL-cholesterol	serum	lipoprotein metabolism	atherosclerosis
triglycerides	serum		
non-esterified free fatty acids	serum		
lipoprotein lipase A ₂	blood		
paraoxonase	serum		
11-dehydrothromboxane B ₂	urine	platelet/coagulation status	
tissue plasminogen activator	blood		
hematocrit	blood	blood viscosity	
fibrinogen	blood		
von Willebrand Factor	plasma		
glucose	plasma	glucose metabolism	diabetes
insulin resistance	blood		
hemoglobin A1c	blood		
rapid-response	slow-response		

LSRO Reduced Risk Review, Core Committee Meeting: October 19, 2005

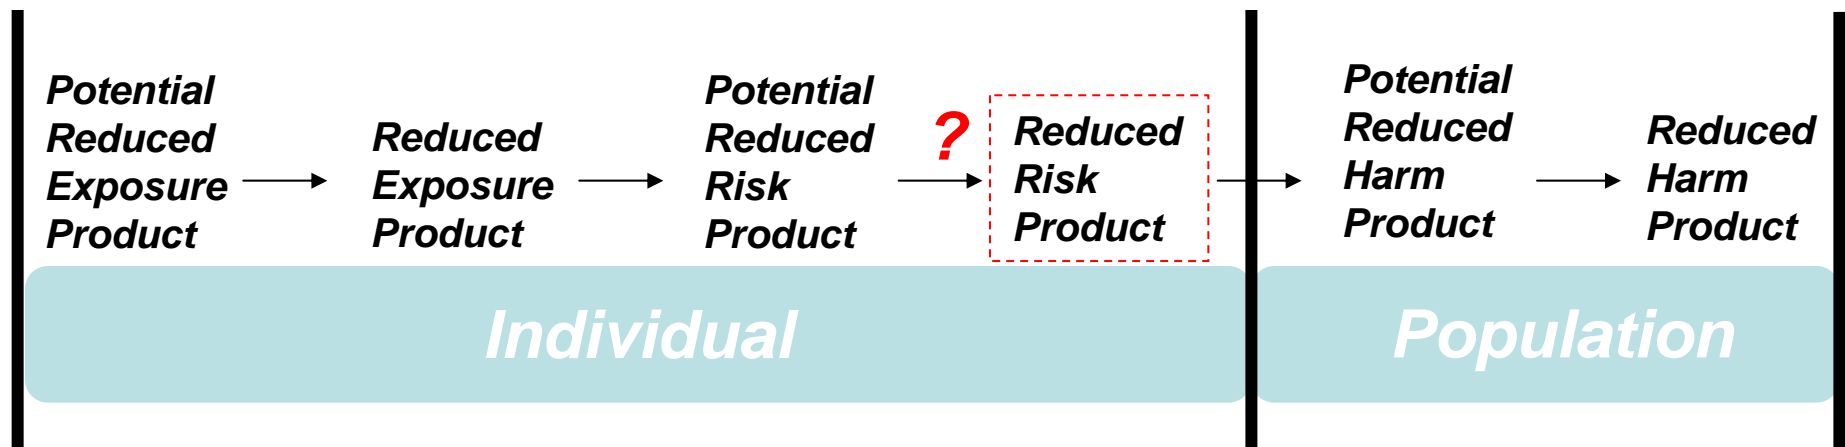

This presentation is intended for the scientific and the public health community. The information shared with the scientific and the public health community is not part of PM USA consumer communications and, if shared with the consumer, has the potential to change the context of the communications intended for the consumer.

Functional Tests

Parameter	Test	Health Effect
FEV1, FVC	spirometry	COPD
arterial elasticity arterial wall thickness	pulse-wave Doppler carotid intima-media thickness	atherosclerosis
LV diastolic function cardiopulmonary exercise performance blood pressure heart rate (<i>variability</i>)	color Doppler echocardiography treadmill exercise test	atherosclerosis sympathetic activation
rapid-response slow-response		

Focus on Risk Evaluation

LSRO Reduced Risk Review, Core Committee Meeting: October 19, 2005

This presentation is intended for the scientific and the public health community. The information shared with the scientific and the public health community is not part of PM USA consumer communications and, if shared with the consumer, has the potential to change the context of the communications intended for the consumer.
